Branch: Těpeře 34, 468 22 Železný Brod
VAT: CZ47284609

Product

ENT Estrela Neon, Estrela Neon Silk, esNEON®

Product Specification

The special technology ENT Estrela NEON, esNEON® presents an unique process in decoration of glass bases and consists in applying a mixture of color pigments in very thin layers that thereafter are fixed with heat. This way a very good chemical and mechanical bond is assured.

The colors glow under the UV „black“ light. The UV-effect enhances thanks to the small particles of special pigments. Once accomplished the chemical boundage, the particles can produce a smooth dust on the surface of the bead that is caused by the heat fixation. This is only a one-time effect on freshly produced beads and no more of color is being released afterwards. Therefore the dust is not to be considered as a quality defect of finished product.

The products do not contain heavy metals: Cd, Pb, CrVI, Hg and are distinguished by a charecheristic of high resistance against water (hot/salt), steam, perspiration, alcohol, cosmetics and other chemical substances.

According to hand-made production, small surface variations and deviations in color shades are tolerated.

When facing intense direct sunshine during an extended period of time, the colors may fade or change.

Cannot be exposed to temperatures higher than 200°C / 392°F.

ENT Estrela Neon, esNEON® is a registred trademark. Displaying and offering products of other manufactures under this brand or its other misuseage will be accordingly legally handled.
