Product specification

Imitation pearls, jewellery-waxed-beads

The product is understood as waxed (imitation) pearls and beads, ie the glass base which is color-surface-treated by so-called waxing (dipping technology).

Waxing is the process of handmade manufacturing, in which the adhesive layer, pearlescent layers, pigmentation and the protective layer are applied on the glass base.

Estrella Es - Press, s.r.o. is the owner of the patent for the method used to make imitation pearls.

Shapes and their sizes are available in all decors (according to the actual shape and color charts), both on threads or loose.

Notice

Due to the raw material used and the technology of hand production, small irregularities on the surface of the pearls and tolerances in the shade of individual colors are allowed.

Loose waxed pearls may show excessive lacquer necks and peeled rings around the holes.

Gradual fading and yellowing of the color shade may occur after long-term exposure to sunlight and other light radiation. This cannot be considered as a qualitative defect.

Care of goods

We recommend to store the beads in a dry and dark environment.

Protect them from aggressive influences (high temperatures, sea salt, etc.) and contact with chemicals (chlorine, cleaners, cosmetic preparations such as hairspray, perfume, nail polish remover, etc.).

Do not wash the beads in washing machine and do not leave them immersed in water for a long time. The contact with water should be limited to the time necessary for washing. Can be cleaned by hand with tepid water (up to 30 ° C) with the addition of fine detergent. Let them dry before storing. Do not use hot air or any other dryer.

Protect the beads from bumps and scratches.

Safety warning

Choking hazard. Small pieces can be swallowed and/or inhaled easily. Keep them away from infants and small children.

Broken glass danger. Avoid rough treatment and protect the beads against breakage. Never wear or work with cracked pieces to avoid getting cut by sharp pieces of broken glass.

Ecology

Production facilities and appliances of Estrella Es - Press, s.r.o. use the latest eco-technologies.

When employed according to their function and purpose, the pearls are completely environmentally friendly and health harmless.

Products do not contain heavy metals: Cd, Pb, CrVI, Hg

The composition of the color coating components used for the resulting appearance of the products corresponds to the REACH registration of chemicals by the European Chemicals Agency located in Helsinki.
